MEDICAL TRAVEL + TAIWAN

MEDICAL TRAVEL IN TAIWAN

Taiwan, an island about the size of the Netherlands, is known as Formosa in history. Many people know Taiwan because of its beautiful scenery, fascinating culture, enticing cuisine and strong high-tech industry. But do you know that Taiwan is also an island famous for health and medical care?

Denmark's popular travel website GlobeSpots.com has ranked Taiwan 8th in its list of top travel destinations for 2019. The highlights of its evaluation include "natural hot springs", "great hiking places surrounded by landscape dominated by mountains and forests", "snacks and foods that leave gourmets spoiled for choices", and so on. All the elements suit friends coming from another country to Taiwan for medical tourism. They can explore this beautiful island during the interval of medical treatment.

Health Screening

Medical Tourism Clinics in Taiwan provide a full range of physical examination services to meet the needs of overseas medical travelers. With the most advanced medical equipment and well-trained medical staff, you are provided with the best medical service that is second to none.

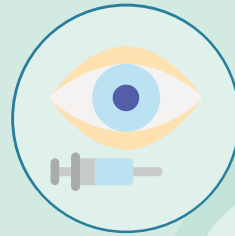

During the course of physical examination, each patient is accompanied by a professional medical staff so that the most complete medical cares are provided. Based on the preliminary physical examination results, the medical physician is able to make a preliminary diagnosis and provide a healthcare management plan to secure the health of overseas medical travelers.

Cosmetic Surgery

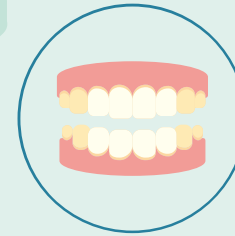

Taiwan's plastic surgeons have created and improved many core surgical techniques, and trained many plastic surgeons from all over the world, and have the most complete and advanced aesthetic medicine centers, providing a variety of medical aesthetic procedures, including breast augmentation, liposuction, double eyelid surgery, bone excision, and so on. In Taiwan, you can enjoy the top high-quality cosmetic surgery services and aesthetic refinements in a peaceful and focused environment. All of these will bring more fond memories to your medical tourism trip.

Ophthalmology

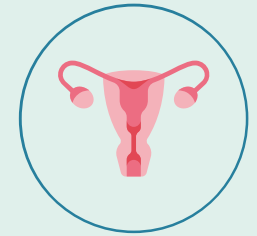

Taiwan is world-renowned for its high medical standards. Many patients fly thousands of miles to seek treatment here. Among the services, eye surgery is one of the most popular items. According to statistics, the top three ophthalmic surgeries are cataract surgery, laser myopia surgery, and eyelid surgery. Taiwan offers high-quality medical care services at reasonable prices, thus attracting many friends coming from overseas to beautify their eyes while going sight-seeing here.

Dentistry

According to statistics from the World Health Organization (WHO), globally, about 30% of people aged over 65 have no natural teeth. Driven by the dual engines of population aging and rising oral health awareness, people are paying more attention to oral diseases and aesthetics. Taiwan is among the countries that provide the highest quality of dental care in the world. The quality is on par with advanced countries such as the United States and Japan, but at relatively lower prices and treatment costs. Chinese-speaking patients even enjoy a language advantage. No wonder, Taiwan is the first choice for dental care among so many people around the world.

Artificial Reproduction

Assisted reproductive technology (ART) in Taiwan has been highly successful. High-quality techniques have resulted in a 36.7% successful implantation rate and 35.8% delivery rate, which are equivalent to the performances of the United States and superior to those of Canada, the United Kingdom, South Korea, and Japan. The access to new technology and medication is also on par with Europe and United States. In addition, ART is very affordable in Taiwan - about 50% of the world's average, which makes Taiwan highly competitive in the global market.
